

Juego de colores con React

```
import React, { Component } from "react";
import { Button } from "reactstrap";
import "bootstrap/dist/css/bootstrap.min.css";

class App extends Component {
  constructor(props) {
    super(props)
    this.state = {
      colores: ["primary", "success", "danger", "warning", "info"],
    }
  }

  cambiarColor = () => {
    let c=this.state.colores
    let uno = c[0]
    c.shift()
    c.push(uno)
    this.setState({colores:c})
  };

  render() {
    return (
      <div>
        <h4>Juego de colores con React</h4>
        <div>
          <Button color={this.state.colores[0]}>1</Button>
          <Button color={this.state.colores[1]}>2</Button>
          <Button color={this.state.colores[2]}>3</Button>
          <Button color={this.state.colores[3]}>4</Button>
          <Button color={this.state.colores[4]}>5</Button>
        </div>
        <Button color="dark" onClick={()=>{this.cambiarColor()}}>
          Reiniciar colores
        </Button>
      </div>
    );
  }
}
```

```
        </Button>
      </div>
    );
  }
};

export default App;
```
